

Aspergillus Agar (AFPA)

Medium used for the identification and determination of specific Aspergillus spp.

• CONTENTS (Liter)

Peptone	10.0 g
Yeast Extract	20.0 g
Ferric Ammonium Citrate	0.5 g
Dichloran	0.002 g
Agar	15.0 g

Final pH = 6.3 ± 0.2 at 25°C

• PROCEDURE

Suspend 45.5 G of powder in 1 L of distilled or deionized water. Heat to boiling until completely dissolved. Sterilize by autoclave at 121°C for 15 minutes. Aseptically add 2 vials of Chloramphenicol supplement (MB-C1817). Cool to 45 - 50°C in water bath. Mix well. Pour into petri dishes.

Chloramphenicol supplement

1 vial contents (Each vial is sufficient for 500 mL of medium)

Chloramphenicol 0.05 g

• INTERPRETATION

Aspergillus Agar (AFPA) is a medium used for the identification and determination of specific Aspergillus spp. Peptone and yeast extract are the nitrogen and vitamin sources. Ferric ammonium citrate assists in the production of orange yellow pigment characteristic of *A. flavus*, *A. parasiticus* and *A. brasiliensis*. Dichloran is the antifungal agent to reduce colony diameters of spreading fungi. Agar is the solidifying agent. Chloramphenicol is a broad-spectrum antibiotic and inhibits a wide range of Gram-negative and Gram-positive bacteria.

• TECHNIC

Inoculate the specimen using a sterile loop to the medium. Incubate at 30 ± 2°C for 48 - 72 hours. Refer appropriate references for recommended test procedure.

• QUALITY CONTROL FOR USE

Dehydrated medium

Appearance: free-flowing, homogeneous

Color: beige

Prepared medium

Appearance : opalescent

Color: amber

Incubation conditions: 30 ± 2°C / 48 - 72 hours

Microorganism	ATCC	Growth	Characteristics
<i>Aspergillus flavus</i>	22546	good	yellowish orange color under the colony
<i>Aspergillus parasiticus</i>	22789	good	yellowish orange color under the colony
<i>Aspergillus brasiliensis</i>	16404	good	pale yellow color under the colony black on the colony
<i>Escherichia coli</i>	25922	inhibited	-

• STORE

The powder is very hygroscopic. Store the powder at room temperature, in a dry environment, in its original container tightly closed and use it before the expiry date on the label. Store prepared medium at 2 - 8°C.
